

KavachIQ NMS

— SEE IT ALL. SOLVE IT FAST. —

Enterprise **Network Monitoring** & **Infrastructure Management** Platform

Overview

KavachIQ NMS is a next-generation enterprise-grade Network Monitoring System designed to provide complete visibility into IT infrastructure, networks, servers, applications, virtual environments, cloud platforms, and security devices. Built with intelligent monitoring, realtime alerting, advanced analytics, and scalable architecture, KavachIQ NMS helps organizations proactively identify issues, reduce downtime, and optimize infrastructure performance.

DASHBOARD OVERVIEW

Key Highlights

Real-time network & infrastructure monitoring

Automatic device discovery & topology mapping

Centralized monitoring dashboard with customizable widgets

Multi-vendor support for network, server, & security devices

Advanced alerting, escalation, & notification engine

SNMP, WMI, SSH, ICMP, HTTP/HTTPS, API-based monitoring

Performance analytics & historical reporting

Cloud, virtualization, & container monitoring

Scalable distributed architecture

Role-based access control (RBAC) & audit logging

AI-assisted anomaly detection & predictive alerting

Multi-tenant architecture support

Network Monitoring

- ✓ Monitor routers, switches, firewalls, wireless controllers, and SD-WAN devices
- ✓ Bandwidth utilization and interface monitoring
- ✓ Latency, packet loss, jitter, and SLA monitoring
- ✓ SNMP Trap and Syslog monitoring

Server & Application Monitoring

- Windows and Linux server monitoring ✓
- CPU, memory, disk, process, and service monitoring ✓
- Health and Availability monitoring applications ✓
- Database monitoring for MySQL, PostgreSQL, MSSQL, Oracle ✓

Topology & Discovery

- ✓ Automatic network discovery
- ✓ Dynamic topology mapping
- ✓ Layer-2 and dependency visualization
- ✓ Geo-based infrastructure mapping

1. TOPOLOGY MAP

Visualize your entire infrastructure with discovery based topology mapping. Identify device status, link utilization and quickly pinpoint issues.

2. ALERT MONITORING

Monitor alerts in real-time with intelligent correlation and escalation workflows. Quickly acknowledge, assign and resolve issues to minimize downtime.

Alerting & Notifications

- ✓ Threshold-based alerting
- ✓ Email, SMS, webhook, and Teams/Slack notifications
- ✓ Escalation matrix and acknowledgment support
- ✓ Event correlation and alert suppression

3. REPORTING & SLA WIDGETS

Track SLA compliance, generate insightful reports and analyze performance trends with customizable widgets and reports.

Dashboards & Reporting

- Custom dashboards and NOC views ✓
- Executive SLA and performance reports ✓
- Historical analytics and trend reporting ✓
- PDF, Excel, and CSV export support ✓

Security & Compliance

- ✓ Role-based user access control
- ✓ Audit logs and activity tracking
- ✓ Encrypted communication support
- ✓ Integration with SIEM and ITSM platforms

Supported Platforms & Devices

- ✓ Cisco, Juniper, Fortinet, Palo Alto, Ruckus, Aruba, Dell, HP, Huawei
- ✓ VMware, Hyper-V, Nutanix, Proxmox
- ✓ Linux, Windows, Unix environments
- ✓ Cloud Platforms: AWS, Azure, Google Cloud
- ✓ Storage Platforms: NetApp, EMC, Infortrend, Synology
- ✓ Applications, databases, and IoT devices

Deployment Models

On-Premises Deployment ✓

Private Cloud Deployment ✓

Public Cloud Deployment ✓

Distributed Multi-Site Architecture ✓

High Availability (HA) Support ✓

Minimum System Requirements

Component	Recommended
CPU	8 Core Processor or higher
RAM	16 GB minimum
Storage	200 GB SSD recommended
Operating System	Ubuntu 22.04 / RHEL / Windows Server
Database	PostgreSQL / MySQL
